Education

University of St Andrews — *Scotland*

BSc Mathematics and Economics (Predicted 2:1) — *Sep. 2024 – Jun. 2028*

Imperial College London (Coursera) — *Online*

Mathematics for Machine Learning Specialization — *2025 – 2026*

Experience

University of St Andrews – School of Chemistry (Dr J.B.O. Mitchell) — *St Andrews*

Machine Learning Researcher — *Apr. 2025 – Present*

- Replicated state-of-the-art aqueous solubility prediction pipeline (Mitchell et al., *ACS Omega* 2024) using LightGBM on ∼**14,000 compounds**; achieved **R^2 = 0.92** and **RMSE = 0.57 log S**.
- Benchmarked tree-boosting methods (LightGBM, XGBoost) against graph neural networks, validating gradient boosting superiority on noisy molecular data with domain-specific feature engineering.

ENODA — *Edinburgh*

Quantitative Analyst — *Jul. 2024 – Present*

- Designed multi-horizon MLP forecasting pipeline for day-ahead electricity prices across European markets; architecture search yielded **12% RMSE improvement** over autoregressive benchmark.
- Quantified marginal value of grid-operator features via regime-balanced evaluation; identified **6 statistically significant predictors** ($p < 0.001$) reducing forecast error by **7.1%**.
- Reduced critical computation latency by **98%** (**50s to <1s**) by vectorizing legacy R codebase and eliminating redundant I/O.

Elphinstone Capital Management — *St Andrews*

Head of Quantitative Research — *Jun. 2025 – Present*

- Deployed real-time execution system on Binance processing live order flow; managed **$10K+ in live capital** with automated risk controls.
- Achieved **top 11 / 1,000+** in HKU x Avenir trading competition deploying cointegration-based statistical model on live orderbook data.
- Architected containerized research environment adopted by **15+ developers** across **5 universities**; reduced onboarding from days to hours.

Mercury Capital Management — *St Andrews*

Team Lead — *Sep. 2024 – Oct. 2025*

- Built CNN with custom loss function in TensorFlow/Keras optimizing risk-adjusted returns for fund-wide algorithm competition.
- Led **4-person team** in IMC Prosperity 3 (**10,000+ participants**), implementing market-making strategy with dynamic spread adjustment.

Projects

Project Assistant – RAG-Powered Productivity Platform — *Python, FastAPI, React, ChromaDB, LangChain*

Creator

- Built **RAG pipeline** over personal data (Microsoft 365, GitHub, OneNote) using ChromaDB with HuggingFace embeddings for semantic retrieval across **6+ integrated platforms**.
- Implemented multi-provider LLM chat interface (Anthropic, OpenAI, Google) with human-in-the-loop action approval workflow for safe AI-driven task automation.

Skills

Languages	Python, R, SQL, JavaScript/TypeScript
ML & AI	PyTorch, TensorFlow/Keras, scikit-learn, LightGBM/XGBoost, LangChain, HuggingFace, Pandas, NumPy
Infrastructure	Docker, Git, FastAPI, REST/WebSocket APIs, CI/CD, PyPI, Linux
Spoken	English, Russian, Ukrainian (native); German (conversational); Hebrew (beginner)

Interests & Activities

Sports	Squash (competed semi-professionally for North of Scotland), Muay Thai, Golf
Academic	Philosophy, Linguistics, Theory of Communications
