Experience

ENODA

Edinburgh

Economics Analyst

Jul. 2024 – Present

- Cut day-ahead electricity price forecast error by **25% (RMSE)** versus an autoregressive benchmark using an ML model on Polish wholesale market data.
- Vectorised a legacy R backtester and removed redundant I/O, cutting computation time by **98%** (50s to <1s).
- Automated ETL pipelines over **2+ years** of hourly market data, ending **10+ hours/week** of manual cleaning; deployed forecasting models to real-time execution on GCP.
- Promoted twice in two years (intern to analyst) and converted to full-time; built a generalisable modelling framework adopted across **4 European markets**.

Elphinstone Capital Management

St Andrews

Founder & Head of Quantitative Research

Jun. 2025 – Jun. 2026

- Founded a UK-wide ML and quantitative trading student association; onboarded **20+ students** across **9 universities** onto a containerised research platform that cut setup from days to hours.
- Led a **3-person team** to **top 11 / 1,000+** in the HKU x Avenir algorithmic trading competition with a cointegration-based strategy; ran it live with **full P&L on \$10K+ AUM** at **<5% drawdown**.
- Won **Highest Trade Volume** at Imperial Algothon 2026 (IMC-sponsored) with a market-making bot using inventory-skewed quotes (Avellaneda-Stoikov-inspired) and time-decaying edge thresholds.

Mercury Capital Management

St Andrews

Team Head

Sep. 2024 – Oct. 2025

- Ranked **1st across all cohorts** in the internal algorithm competition, delivering the highest risk-adjusted returns in fund history with a rank-based arbitrage CNN and a custom loss function.
- Guided a **4-person team** to a **top 5%** finish in **IMC Prosperity 3 (10,000+ participants)** with a market-making strategy using dynamic spread adjustment.
- Taught **3 lectures** on model validation and risk management to **15 students**.

Castlecliffe Consultancy

St Andrews

Team Lead

Jan. 2025 – May 2025

- Built econometric models behind fixed-income portfolio positioning for a US regional bank's desk; the client adopted **3 of 4** recommendations, informing **\$50M+** in capital allocation.

Projects

Project Assistant – AI Productivity Platform

Python, FastAPI, React,
ChromaDB, Docker

Creator

- Unified **6+ productivity platforms** (Microsoft 365, GitHub, Telegram, OneNote) into a single RAG-powered interface; eliminated context-switching for end users.
- Architected modular FastAPI backend (**15+ routers**) with React frontend and an AI action-approval workflow gating every automated change before it touches user data.

crypto-backtester-binance – Open-Source Backtesting Library

Python, pytest, CI/CD, published
on PyPI

Founder & Maintainer

- Published an **open-source** quant backtesting library to PyPI with full CI/CD pipeline; supports both Binance spot and perpetual futures with cached historical OHLCV, trades, funding rates, and open interest.
- Built an order management system simulating positions, balances, and trade history; pluggable position managers handle risk sizing, and permutation testing validates statistical significance of returns (Sharpe ratio, drawdown, PnL).

Skills

Programming	Python, SQL, R, TypeScript / JavaScript; Docker, CI/CD, Git, FastAPI, React, PyPI publishing
Quant & ML	NumPy, pandas, scikit-learn, XGBoost, TensorFlow/Keras; econometrics, statistical modelling, backtesting, optimisation
Tools & Data	GCP, AWS S3, Bloomberg Terminal (BMC certified), PowerBI, Excel
Languages	English, Russian, Ukrainian (native); German (conversational); Hebrew (beginner)

Education

University of St Andrews

Scotland

BSc Mathematics & Economics (Predicted 1st)

Sep. 2024 – Jun. 2028

- Relevant coursework: Linear Algebra, Multivariate Calculus, Probability & Statistics, Microeconomic Theory, Macroeconomics.
- Year abroad 2026/27: Bocconi University, Milan (Semester 1) and University of Hong Kong (Semester 2).

Imperial College London (via Coursera)

Mathematics for Machine Learning Specialization

May 2026

- 3-course specialisation: Linear Algebra (vectors, matrices, eigendecomposition, PageRank), Multivariate Calculus (gradients, optimisation, backpropagation), and PCA (dataset statistics, dimensionality reduction on MNIST).

Gordonstoun

Scotland

A-Levels: Economics (A*), Russian (A*), German (A), Mathematics (A), Physics (A)

Sep. 2022 – Jun. 2024

- King Constantine Medal: sole annual recipient for outstanding contribution to school community.

Competitions

2026	1st Place – Case Competition , McKinsey Tech & AI Event	London
2025	Top 11 / 1,000+ , HKU x Avenir WEB3 Algorithmic Trading Competition	
2025	Top 5% / 10,000+ , IMC Prosperity 3	
2024	1st Place (all cohorts) , Mercury Capital Algorithm Competition	
2026	1st Place – EDA Challenge , Bloomberg Decoded	London
2026	1st Place – Puzzle Challenge , Bloomberg Decoded	London
2026	Highest Trade Volume Award , Imperial Algothon 2026	London

Certifications

J.P. Morgan via Forage

Quantitative Research Job Simulation

Jun. 2026

- Virtual experience covering natural gas commodity pricing, credit risk modelling in Python, and FICO score bucketing for a quant trading desk. Credential ID: LsyyNwoHaMNt4dkPz.

Kaggle

Intro to Deep Learning

Jun. 2025

- Built and trained neural networks in TensorFlow/Keras: activation functions, SGD/Adam optimisers, regularisation (dropout, batch normalisation), and binary classification.

Kaggle

Intermediate Machine Learning

Jun. 2025

- Handled missing values, categorical encoding, sklearn pipelines, cross-validation, gradient boosting (XGBoost), and data leakage diagnosis.

Codecademy

Learn R

May 2025

- R fundamentals, data manipulation with dplyr and tidyr, descriptive statistics and hypothesis testing, and visualisation with ggplot2.

Coursera

Investment Risk Management

Feb. 2024

- Portfolio risk analysis using the Treynor ratio and Value at Risk (VaR); risk-to-reward quantification and loss estimation under normal market conditions.
